

EWS

System that provides safety and security

Emergency Warning Server

PAT.4923304

Ministry of Economy, Trade and Industry "national market development quotient material" support system

EWS Incorporated

Emergency information system of the existing announcement by voice

	Existing
Emergency	Broadcast
Fire	Broadcast/revolving light
Evacuation warning	Broadcast/Emergency bell
Mechanical abnormalities	Broadcast/revolving light
Earthquake	Broadcast

《 Problems 》

- Emergency information system existing in analog, is the capital of each alone. Alarm for each system, View buzzer own, in revolving light in notice a dedicated device.
- The means of transmittal of emergency information most only "sound"
⇒in the more
- Most Japanese only "voice (announcement)" is.
⇒ It is not easily transmitted to foreigners .

Emergency information network display system EWS

To the personal computer and large image that has already a network connection, the information of 30 kinds such as Emergency warning from the Crisis management office, is a system which is displayed instantly in the "image and sound." You can change the display on each computer in the same signal channel. (Japanese, English, Turkish, Bengali etc.) Delivery of mail you can at the same time to display. You can control a variety of equipment options controller .

"Defend the safety of themselves"

Overview of System

The biggest feature simple system configuration with an emphasis on breaking resistance.

In the office, schools, hospitals, factories, etc., and connected to the terminal equipment EWS various crime prevention sensor that is already installed, facility monitoring sensors, earthquake early warning unit and the like.

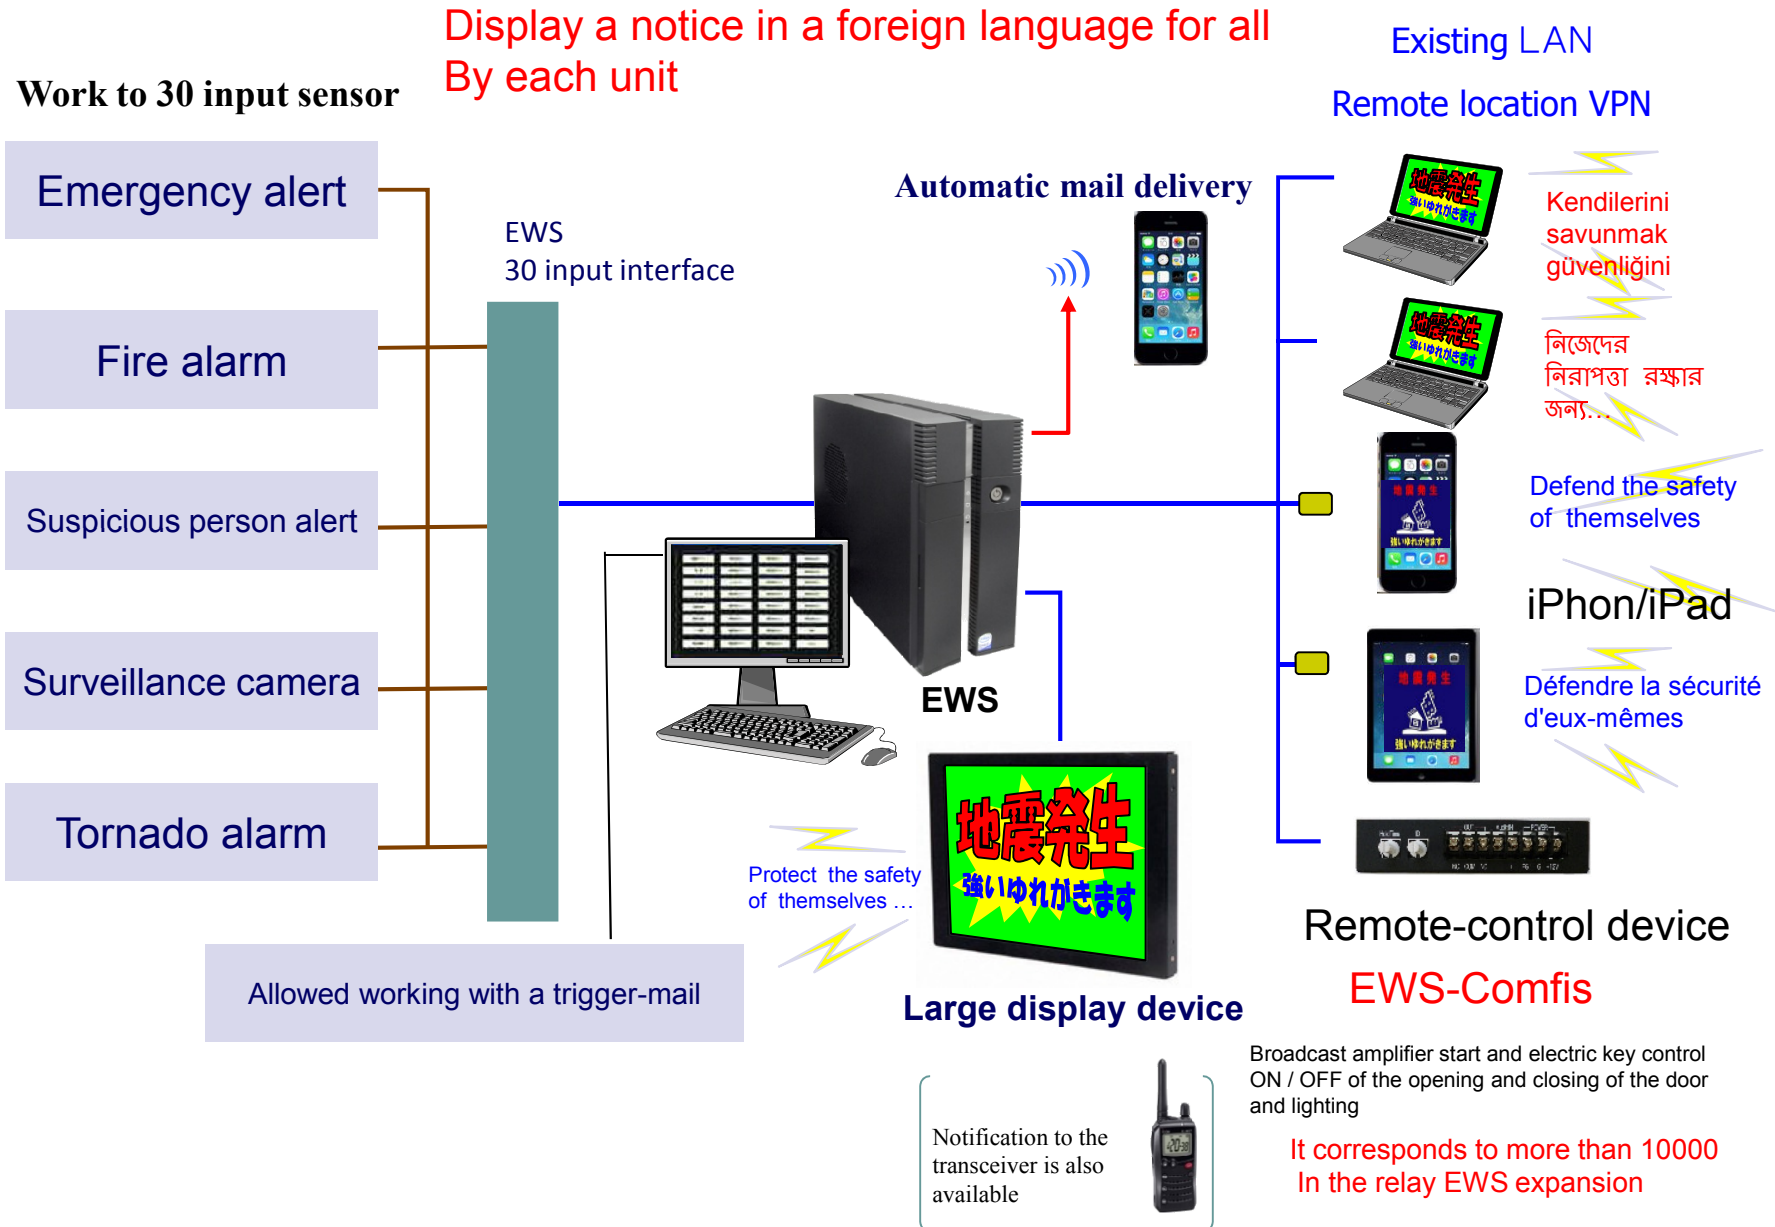

The large display and the computer screen in use within the facility, EWS, which has received the signal from each terminal equipment, display the "voice and image" corresponding to the signal immediately.

Also control of various devices. **1000 or more units in the simple setting** (Separate device "EWS Comfis unit")

Such as revolving light and room broadcast equipment, Automatic door. Electric lock system.

EWS System configuration

Emergency alert

The effective response of emergency alert !
